RE: Mill Site

October, 4 2000

Bureau Of Land Management
Cheryl Martinez
Salt Lake Office
2370 South 2300 West

Dear Cheryl Martinez:

At this time Interstate Rock Products would like to pursue only INP #1. INP #2 will be pursued once INP #1 has been completed.

Here are they answers to your question you have requested. I hope they are affective to your need's.

1. Interstate Rock Products is asking for 4.8 acres of the 5 acre mill site {INP #1}. IRP will leave 5 foot undisturbed area around the parameter to stock pile the top soil with in this parameter. This will be done around the whole parameter except for the two forty foot approuchment for access from highway 30.
2. IRP plans to have continuos work, with the intent of working seven days a week.
3. Possible equipment we may use at this location is as follows:
Fork lifts, rubber tired back hoe, track excavator, dozier, belly dumps, end dumps, flat beds, low boys, fuel trucks, pick ups, shop van, mobile homes, washing trommel, portable crusher, water truck, sanitation truck, well pump, recycle pump, generators, light plants, stone cutting saws, containers, and constructed buildings.
4. The containment ponds would be forty foot long, ten foot wide, and three foot deep. The wall height would be three foot. IRP would dig three foot and use the excavation for the walls. IRP would not use a liner for the fact that the material being washed is dirt and rock dust. The same material used in the construction of the containment pond.
5. The trommel usage is approximately forty five hundred gallons a day. This usage can be reused, through proper containment of our water.
6. We currently plan on sixteen to twenty men working on the mill site.

7. IRP plans on producing approximately ten thousand tons per year. Approximately five hundred ton of waist will be produced per year. IRP will use this waist for road and pads at the mill site and mining operations.
8. Waist rock at the conclusion of our operation will be either hauled away or buried.
9. The mill site is staked with brown steel fence posts, with white caps.
10. IRP's current septic disposal will be with porta john's.
11. Please refer to map provided.

Thank you for your time and patience. If I can provide any other information please contact Michael Cates at (435) 279 - 6455.

Sincerely,

Michael Cates

Sandy, Utah 84093-1139

Dear Mr. Riordan:

Thank you for your letter received by this office on April 9, 2001, informing us that Michael Pauletto would not conduct milling activities under a Notice on the INP #1 mill site (UMC367410) in T. 13 N., R. 13 W., Section 31, Box Elder County, Utah.

Because you have withdrawn the Notice and the proposed mill site area has not been disturbed, we are therefore closing the subject casefile. No further disturbance is permitted on the subject mill site.

If you have any questions or require additional information, please feel free to contact Cheryl Martinez of my staff at (801) 977-4371.

Sincerely,

/S/ MICHAEL G. NELSON
